

Automation review: Bayside Print and Signs

Commercial printing, vehicle wraps, and storefront signage · 17 people · 5 processes reviewed · intake collected 2026-08-08

Getting artwork approved by the customer is the strongest candidate of the 5 reviewed, at 3.65 out of 5.00 and in Worth a pilot. What puts it top is pain: The business describes mistakes and rework, delays and chasing, and the strain on staff across a process that changes hands 1 time.

Read this before the rankings.

- Scores in this report came from the stub judge, which applies fixed thresholds to the intake rather than making a judgement. They show that the pipeline runs. They are not an assessment.
- Rubric 1.3.0-draft is a draft and has not been approved, so the weights behind these rankings are still open to change.
- No number is tracked today for Scheduling the press floor, Reordering print media and vinyl, so the return on those cannot be evidenced and their return band is capped. The first piece of work on any of them is to start counting.

RANKED OPPORTUNITIES

NO.	PROCESS	RECOMMENDATION	SCORE	MAIN LIMIT
1	Getting artwork approved by the customer 18 proofs a day · 4 persons · 5 steps	Worth a pilot	3.65	Implementation risk (5/5)
2	Quoting trade and retail work 12 quotes a day · 2 persons · 4 steps	Worth a pilot	3.45	Implementation risk (5/5)
3	Closing out installation paperwork 9 installs a week · 3 persons · 2 steps	Worth a pilot	3.15	Implementation risk (4/5)
4	Scheduling the press floor 30 live jobs each run · 3 persons · 3 steps	Worth a pilot	3.15	Implementation risk (4/5)
5	Reordering print media and vinyl 25 line items a week · 3 persons · 3 steps	Worth a pilot	3.10	Pain (2/5)

HIGHEST RANKED: GETTING ARTWORK APPROVED BY THE CUSTOMER

Pain	4/5	The business describes mistakes and rework, delays and chasing, and the strain on staff across a process that changes hands 1 time.
Frequency	5/5	Stated frequency of daily works out at about 250 runs a year.
Volume	4/5	About 4,500 proofs a year, from 18 proofs a day. The business gave this as an estimate.
Data availability	3/5	The records sit in the shared drive in a mostly consistent shape, though some of the input still arrives in a form that has to be handled by hand first.
Implementation risk (inverted)	5/5	This process is flagged as handles money, the work is mixed, a couple of cases in ten need handling differently, and an error would be seen by a customer rather than caught inside the business.
Return band	5/5	About 1,056 hours a year go into this process, from 22 hours a week over 48 working weeks. The business already tracks: average days from proof sent to approval, tracked in the production spreadsheet, currently about three.

Weighted score 3.65 out of 5.00, which places it in Worth a pilot. The strongest part of the case is pain. The part most likely to stop it is implementation risk.

SYSTEM CHANGES ALREADY PLANNED

PROCESS	WHAT IS CHANGING	TIMEFRAME
Getting artwork approved by the customer	We have signed for a print management system called Clarity that has a customer approval portal built in, and it is supposed to go live at the end of the quarter.	within 3 months
Closing out installation paperwork	The installers have been asking for a phone app to capture sign off on site, and one of the owners has been looking at options but nothing is chosen.	later, or not yet known
Scheduling the press floor	The same Clarity system is supposed to include a scheduling board, but the owners have not agreed whether the floor will use it or whether the whiteboard stays.	in 3 to 12 months

This did not affect any score, band, or ranking above. It is a question of when and how to build rather than whether, and the sequencing is a judgement for the human review.

WHAT TO DO WITH THIS

1. Check the figures. Volumes and time estimates came from the intake and were not verified.
 2. Read the process maps in the full report and correct any step the engine got wrong.
 3. Take the highest ranked item only, and time box a test of it before committing to anything.
-

This report was generated by an AI system. It scores each process against a fixed rubric of six criteria and ranks the results. It has not visited the business, spoken to anyone, or checked any of the figures it was given. Treat every finding as a starting point for a human review, not as a decision. Generated 2026-08-08 against rubric 1.3.0-draft by judge stub-heuristic-v1 in stub mode. This line repeats what the page footer says, because not every PDF renderer produces the footer.
